

Standard First Aid Emergency Protocols

MediCart Clinical Reference Library | Verified Guidelines

1. First Aid for Minor Burns

- Cool the burn immediately by holding the area under cool, running tap water for 10 to 15 minutes. Do NOT use ice, butter, or oil, as this causes tissue damage.
- Apply a thin layer of **Burnol Antiseptic Cream** to soothe the skin and prevent bacterial growth.
- Cover the burn loosely with a sterile non-stick bandage or gauze pads. Do not pop blisters.

2. Managing Open Wounds & Bleeding

- Apply direct pressure on the wound using a sterile gauze pad or clean cloth until bleeding stops.
- Clean the wound under running tap water or clean with diluted **Dettol Antiseptic Liquid**.
- Apply an antibiotic ointment like **Soframycin** or **Neosporin** to maintain moisture and prevent infection.
- Secure a clean bandage or medical tape over the wound dressing.

3. Insect Bites & Sprains

- Bites: Wash the area with soap and water, apply Calamine lotion or Clotrimazole cream to soothe itching.
- Sprains: Use the R.I.C.E protocol: Rest the limb, Ice the injury for 20 mins using an Ice Pack, Compress using an elastic crepe bandage, and Elevate the limb above heart level.
